

AMENDMENTS TO THE SPECIFICATION

Please replace paragraph [0057] beginning at page 17 with the following amended paragraph:

[0057] In this example, upon receiving the angle change request, the system review the EP map to determine if the angle change request is permitted. By comparing the address information for the audio/video stream with the information stored in the EP, the system determines that address information does not correspond to condition 4 in Fig. 6, i.e., the angle change request does not occur at permitted angle point. As illustrated in Fig. 8[[9]], the angle change request is delayed until the system reaches the end of the Angle Block, and condition 4 of Fig. 6 is met, that permits processing of the angle change. Upon execution of the angle change request, the system skips to Angle Block 2 in the A/V stream to the SPN_start address for the requested angle, in this case, the second data block of Angle Block (Angle 2).
